*============================================================*
|   Special command line arguments in XP-SWMM2000. This     |
|   now includes program defaults. $Keywords are the program|
|   defaults.  Other Keywords are from the SWMMCOM.CFG file.|
|   or the command line or any cfg file on the command line.|
|   Examples include these in the file xpswm.bat under the   |
|   section :solve or in the windows version XPSWMM32 in the|
|   file solve.bat                                           |
|                                                            |
|   Note: the cfg file should be in the subdirectory swmxp   |
|         or defined by the set variable in the xpswm.bat    |
|         file.  Some examples of the command lines possible|
|         are shown below:                                   |
|                                                            |
|   swmmd swmmcom.cfg                                        |
|   swmmd my.cfg                                             |

#    Last Updated June,2005 by XP Software           #

*==========================================================*
|        HYDRAULICS TABLES IN THE OUTPUT FILE              |
|  These are the more important tables in the output file. |
|  You can use your editor to find the table numbers,      |
|  for example: search for Table E20 to check continuity.  |
|  This output file can be imported into a Word Processor  |
|  and printed on US letter or A4 paper using portrait     |
|  mode, courier font, a size of 8 pt. and margins of 0.75 |
|                                                          |
| Table E1   - Basic Conduit Data                          |
| Table E2   - Conduit Factor Data                         |
| Table E3a  - Junction Data                               |
| Table E3b  - Junction Data                               |
| Table E4   - Conduit Connectivity Data                   |
| Table E4a  - Dry Weather Flow Data                       |
| Table E4b  - Real Time Control Data                      |
| Table E5   - Junction Time Step Limitation Summary       |
| Table E5a  - Conduit Explicit Condition Summary          |
| Table E6   - Final Model Condition                       |
| Table E7   - Iteration Summary                           |
| Table E8   - Junction Time Step Limitation Summary       |
| Table E9   - Junction  Summary  Statistics               |
| Table E10  - Conduit   Summary  Statistics               |
| Table E11  - Area assumptions used in the analysis       |
| Table E12  - Mean conduit information                    |
| Table E13  - Channel losses(H) and culvert info          |
| Table E13a - Culvert Analysis Classification             |
| Table E14  - Natural Channel Overbank Flow Information   |
| Table E14a - Natural Channel Encroachment Information    |
| Table E14b - Floodplain Mapping                          |
| Table E15  - Spreadsheet Info List                       |
| Table E15a - Spreadsheet Reach List                      |
| Table E16  - New Conduit Output Section                  |
| Table E17  - Pump Operation                              |
| Table E18  - Junction Continuity Error                   |
| Table E19  - Junction Inflow & Outflow Listing           |
| Table E20  - Junction Flooding and Volume List           |
| Table E21  - Continuity balance at simulation end        |
| Table E22  - Model Judgement Section                     |

Time Control from Hydraulics Job Control
Year.........    2007 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................     17280
Length of integration step is......      5.00 seconds
Simulation length...................     24.00 hours
Do not create equiv. pipes(NEQUAL)..        0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.     41.67 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..     41.67 minutes
Hot start file parameter (REDO)....         0
Initial time........................      0.00 hours

Iteration variables: Flow Tolerance.   0.00100
                     Head Tolerance.   0.00100
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....   193
     or user defined hydrographs....

Printed output for the following  1 Conduits

    E131

Flow rate will be plotted for the following   1 Conduits

    E131

        Natural Cross-Section information for Channel A16-AF4
        =====================================================
         Cross-Section ID (from X1 card) :     1.0 Channel sequence number :     1

```
*================================================*
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length  |
| in the output file all it means is that the       |
| program will lower the internal time step to      |
| satisfy this condition (explicit condition).      |
| You control the actual internal time step by      |
| using the minimum courant time step factor in the |
| HYDRAULICS job control.  The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection.    |
| You have further control by using the modify      |
| conduit option in the HYDRAULICS Job Control.     |

*=================*
|  Conduit Volume  |
*=================*

Full pipe or full open conduit volume
Input full depth volume.............    9.0624E+07 cubic feet

===> Warning !! The upstream and downstream junctions for the following conduits
                have been reversed to correspond to the positive flow and decreasing
                slope convention.  A negative flow in the output thus means
                the flow was from your original upstream junction to your original
                downstream junction.  Any initial flow has been multiplied by -1.

                1.  Conduit #...AF14-AF16   has been changed.

Conduit Name	From Junction	To Junction	Type	Area (ft2)	Depth (ft)	Discharge Coefficient	Height Above Junction (ft)
rect-orif	Node458	B-F61	Rect Side	0.50	0.50	0.670	0.000

====> EQUIVALENT PIPE INFORMATION FOR ORIFICE 1
CONDUIT NAME..... rect-orif
Upstream node..... Node458
Downstream node..... B-F61
PIPE DIAMETER..... 0.50
PIPE LENGTH..... 500.00
MANNINGS ROUGHNESS..... 0.0037
INVERT ELEVATION AT UPSTREAM END..... 123.2600
INVERT ELEVATION AT DOWNSTREAM END... 123.2500

Note: For a Bottom-outlet orifice the invert elevation of the downstream node will be
adjusted to accomodate the equivalent conduit. Conduit grades are not affected.

ERROR !!! The Weir crest of weir underHWY6 is below the invert of Node: Node457

==
| Table E10 - CONDUIT SUMMARY STATISTICS |
| Note: The peak flow may be less than the design flow |
| and the conduit may still surcharge because of the |
| downstream boundary conditions. |
| |
| * denotes an open conduit that has been overtopped |
| this is a potential source of severe errors |
==

Conduit Name	Design Flow (cfs)	Conduit Design Velocity (ft/s)	Maximum Vertical Depth (in)	Maximum Computed Flow (cfs)	Time of Occurence Hr.	Min.	Maximum Computed Velocity (ft/s)	Time of Occurence Hr. Table E15 - SPREADSHEET INFO LIST

Conduit Flow and Junction Depth Information for use in spreadsheets. The maximum values in this table are the true maximum values because they sample every time step. The values in the review results may only be the maximum of a subset of all the time steps in the run.

Note: These flows are only the flows in a single barrel.

Conduit Name	Maximum Flow (cfs)	Total Flow (ft^3)	Maximum Velocity (ft/s)	Maximum Volume (ft^3)	##	Junction Name	Invert Elevation (ft)	Maximum Elevation (ft)

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3 depending on the units in your model.

Constant	User	Interface	DWF	Inflow	RNF Layer	Inflow

Junction Name	Inflow to Node	Inflow to Node	Inflow to Node	Inlow to Node	through Outfall	Inflow to Node	Outflow from Node	Evaporation from Node	from 2D Layer
A2	0.0000	24201.0000	0.0000	0.0000	0.0000	0.0000	0.0000	0.0000

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

Simulation Specific Information			
Number of Input Conduits.....	257	Number of Simulated Conduits.....	267
Number of Natural Channels.....	36	Number of Junctions.....	242
Number of Storage Junctions.....	41	Number of Weirs.....	2
Number of Orifices.....	1	Number of Pumps.....	0
Number of Free Outfalls.....	7	Number of Tide Gate Outfalls.....	0

Average % Change in Junction or Conduit is defined as:
Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull
Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull

The Conduit with the largest average change was..BF67-BF11 with 2.632 percent
The Junction with the largest average change was.B-F67 with 0.851 percent
The Conduit with the largest sinuosity was.....BF77-BF81 with 533.517

Table E21. Continuity balance at the end of the simulation
Junction Inflow, Outflow or Street Flooding
Error = Inflow + Initial Volume - Outflow - Final Volume

#####################################################
# Table E22. Numerical Model judgement section    #
#####################################################

Your overall error was                                    -1.3908 percent

Worst nodal error was in node B-F81            with        -4.1649 percent

Of the total inflow this loss was                          0.3008 percent

Your overall continuity error was                  Great

                                            Excellent Efficiency
```

```
Efficiency of the simulation                      1.37

Most Number of Non Convergences at one Node       1.

Total Number Non Convergences at all Nodes        1.

Total Number of Nodes with Non Convergences       1.

*============================================================*
|   Special command line arguments in XP-SWMM2000. This     |
|   now includes program defaults. $Keywords are the program|
|   defaults.  Other Keywords are from the SWMMCOM.CFG file.|
|   or the command line or any cfg file on the command line.|
|   Examples include these in the file xpswm.bat under the   |
|   section :solve or in the windows version XPSWMM32 in the|
|   file solve.bat                                           |
|                                                            |
|   Note: the cfg file should be in the subdirectory swmxp   |
|         or defined by the set variable in the xpswm.bat    |
|         file.  Some examples of the command lines possible|
|         are shown below:                                   |
|                                                            |
|   swmmd swmmcom.cfg                                        |

#    Last Updated June,2005 by XP Software            #

*============================================================*
|        HYDRAULICS TABLES IN THE OUTPUT FILE                |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |
| Table E7   - Iteration Summary                             |
| Table E8   - Junction Time Step Limitation Summary         |
| Table E9   - Junction  Summary  Statistics                 |
| Table E10  - Conduit   Summary  Statistics                 |
| Table E11  - Area assumptions used in the analysis         |
| Table E12  - Mean conduit information                      |
| Table E13  - Channel losses(H) and culvert info            |
| Table E13a - Culvert Analysis Classification               |
| Table E14  - Natural Channel Overbank Flow Information     |
| Table E14a - Natural Channel Encroachment Information      |
| Table E14b - Floodplain Mapping                            |
| Table E15  - Spreadsheet Info List                         |
| Table E15a - Spreadsheet Reach List                        |
| Table E16  - New Conduit Output Section                    |
| Table E17  - Pump Operation                                |
| Table E18  - Junction Continuity Error                     |
| Table E19  - Junction Inflow & Outflow Listing             |
| Table E20  - Junction Flooding and Volume List             |
| Table E21  - Continuity balance at simulation end          |
| Table E22  - Model Judgement Section                       |
*============================================================*

Time Control from Hydraulics Job Control
Year.........    2007 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................     86400
Length of integration step is......      1.00 seconds
Simulation length...................     24.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.      8.33 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..      8.33 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00010
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....   179
     or user defined hydrographs....

Printed output for the following  1 Conduits

    E131

Flow rate will be plotted for the following   1 Conduits

    E131

        Natural Cross-Section information for Channel BF63-BF61
        =======================================================
         Cross-Section ID (from X1 card) :     1.0 Channel sequence number :     1

  Left Overbank Length   :     40.0 ft               Maximum Elevation        :   125.72 ft.
  Main Channel Length    :     40.0 ft               Maximum Depth            :     5.10 ft.
  Right Overbank Length  :     40.0 ft               Maximum Section Area     :  44.5500 ft^2
                                                     Maximum hydraulic radius :     1.36 ft.
  Manning N :      0.013  to Station           0.0    Max topwidth             :    30.00 ft.
    "    "  :      0.013  in main Channel             Maximum Wetted Perimeter : 3.27E+01 ft

If there are messages about (sqrt(g*d)*dt/dx), or the sqrt(wave celerity)*time step/conduit length in the output file all it means is that the program will lower the internal time step to satisfy this condition (explicit condition). You control the actual internal time step by using the minimum courant time step factor in the HYDRAULICS job control. The message put in words states that the smallest conduit with the fastest velocity will control the time step selection. You have further control by using the modify conduit option in the HYDRAULICS Job Control.

==================
| Conduit Volume |
==================

Full pipe or full open conduit volume
Input full depth volume.....   9.0209E+07 cubic feet

===> Warning !! The upstream and downstream junctions for the following conduits
have been reversed to correspond to the positive flow and decreasing
slope convention. A negative flow in the output thus means
the flow was from your original upstream junction to your original
downstream junction. Any initial flow has been multiplied by -1.

Conduit Name	From Junction	To Junction	Type	Area (ft2)	Depth (ft)	Discharge Coefficient	Height Above Junction (ft)
rect-orif	Node458	MH-33	Rect Side	0.50	0.50	0.670	0.000

====> EQUIVALENT PIPE INFORMATION FOR ORIFICE 1
CONDUIT NAME..... rect-orif
Upstream node..... Node458
Downstream node..... MH-33
PIPE DIAMETER..... 0.50
PIPE LENGTH..... 500.00
MANNINGS ROUGHNESS..... 0.0037
INVERT ELEVATION AT UPSTREAM END..... 123.2600
INVERT ELEVATION AT DOWNSTREAM END... 123.2500

Note: For a Bottom-outlet orifice the invert elevation of the downstream node will be
adjusted to accomodate the equivalent conduit. Conduit grades are not affected.

===
| Table E10 - CONDUIT SUMMARY STATISTICS |
| Note: The peak flow may be less than the design flow |
| and the conduit may still surcharge because of the |
| downstream boundary conditions. |
| |
| * denotes an open conduit that has been overtopped |
| this is a potential source of severe errors |
===

Conduit Name	Design Flow (cfs)	Conduit Design Velocity (ft/s)	Maximum Vertical Depth (in)	Maximum Computed Flow (cfs)	Time of Occurence Hr.	Time of Occurence Min.	Maximum Computed Velocity (ft/s)	Time of Occurence Hr.	Time of Occurence Min.	Ratio of Max. to Design Flow	Maximum Water Elev at Upstream (ft)	Maximum Water Elev at Pipe Ends Dwnstrm (ft)	Ratio d/D US	Ratio d/D DS

Table E15a - SPREADSHEET REACH LIST

Peak flow and Total Flow listed by Reach or those conduits or diversions having the same upstream and downstream nodes.

Upstream Node	Downstream Node	Maximum Flow (cfs)	Total Flow (ft^3)

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3 depending on the units in your model.

Junction Name	Constant Inflow to Node	User Inflow to Node	Interface Inflow to Node	DWF Inlow to Node	Inflow through Outfall	RNF Layer Inflow to Node	Outflow from Node	Evaporation from Node	Inflow from 2D Layer

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

==================================
| Simulation Specific Information |
==================================

Number of Input Conduits.....	280	Number of Simulated Conduits.....	288
Number of Natural Channels.....	3	Number of Junctions.....	252
Number of Storage Junctions.....	93	Number of Weirs.....	1
Number of Orifices.....	1	Number of Pumps.....	0
Number of Free Outfalls.....	6	Number of Tide Gate Outfalls.....	0

===
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
===

The Conduit with the largest average change was..L-D-17 with 1.747 percent
The Junction with the largest average change was.D-17 with 0.337 percent
The Conduit with the largest sinuosity was.....L-A-59 with 88.766

==
| Table E21. Continuity balance at the end of the simulation |
| Junction Inflow, Outflow or Street Flooding |
| Error = Inflow + Initial Volume - Outflow - Final   Volume |
==

################################################
# Table E22. Numerical Model judgement section #
################################################

Your overall error was                                -0.4418 percent

Worst nodal error was in node E100-Pond        with       -23.9723 percent

Of the total inflow this loss was                      0.6678 percent

Your overall continuity error was                  Excellent

                                                  Excellent Efficiency

Efficiency of the simulation                       1.49

Most Number of Non Convergences at one Node        0.

Total Number Non Convergences at all Nodes         0.

Total Number of Nodes with Non Convergences        0.

|   Special command line arguments in XP-SWMM2000. This     |
|   now includes program defaults. $Keywords are the program|
|   defaults.  Other Keywords are from the SWMMCOM.CFG file.|
|   or the command line or any cfg file on the command line.|
|   Examples include these in the file xpswm.bat under the   |
|   section :solve or in the windows version XPSWMM32 in the|
|   file solve.bat                                           |
|                                                            |
|   Note: the cfg file should be in the subdirectory swmxp   |
|         or defined by the set variable in the xpswm.bat    |
|         file.  Some examples of the command lines possible|
|         are shown below:                                   |
|                                                            |
|   swmmd swmmcom.cfg                                        |
|   swmmd my.cfg                                             |
|   swmmd nokeys nconv5 perv extranwq                        |

|        HYDRAULICS TABLES IN THE OUTPUT FILE              |
|  These are the more important tables in the output file.  |
|  You can use your editor to find the table numbers,       |
|  for example: search for Table E20 to check continuity.   |
|  This output file can be imported into a Word Processor   |
|  and printed on US letter or A4 paper using portrait      |
|  mode, courier font, a size of 8 pt. and margins of 0.75  |
|                                                           |
| Table E1   - Basic Conduit Data                           |
| Table E2   - Conduit Factor Data                          |
| Table E3a  - Junction Data                                |
| Table E3b  - Junction Data                                |
| Table E4   - Conduit Connectivity Data                    |
| Table E4a  - Dry Weather Flow Data                        |
| Table E4b  - Real Time Control Data                       |
| Table E5   - Junction Time Step Limitation Summary        |

*==========================================================*

Time Control from Hydraulics Job Control
Year.........    1995 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................    172800
Length of integration step is......      1.00 seconds
Simulation length...................     48.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.      8.33 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..      8.33 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00100
                     Head Tolerance.   0.00100
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....    93
     or user defined hydrographs....

        Natural Cross-Section information for Channel E135.4
        ====================================================

==========
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |
| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |

| Table E10 - CONDUIT SUMMARY STATISTICS |
| Note: The peak flow may be less than the design flow |
| and the conduit may still surcharge because of the |
| downstream boundary conditions. |
| |
| * denotes an open conduit that has been overtopped |
| this is a potential source of severe errors |
==

Conduit Name	Design Flow (cfs)	Conduit Design Velocity (ft/s)	Maximum Vertical Depth (in)	Maximum Computed Flow (cfs)	Time of Occurence Hr.	Time of Occurence Min.	Maximum Computed Velocity (ft/s)	Time of Occurence Hr.	Time of Occurence Min.	Ratio of Max. to Design Flow	Maximum Water Elev at Pipe Ends Upstream (ft)	Maximum Water Elev at Pipe Ends Dwnstrm (ft)	Ratio d/D US	Ratio d/D DS

| Table E15 - SPREADSHEET INFO LIST |
| Conduit Flow and Junction Depth Information for use in |
| spreadsheets. The maximum values in this table are the |
| true maximum values because they sample every time step. |
| The values in the review results may only be the |
| maximum of a subset of all the time steps in the run. |
| Note: These flows are only the flows in a single barrel. |
===

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3 depending on the units in your model.

Junction Name	Constant Inflow to Node	User Inflow to Node	Interface Inflow to Node	DWF Inlow to Node	Inflow through Outfall	RNF Layer Inflow to Node	Outflow from Node	Evaporation from Node	Inflow from 2D Layer
A-10	0.0000	124884.0000	0.0000	0.0000	0.0000	0.0000	0.0000	0.0000

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

==================================
| Simulation Specific Information |
==================================

Number of Input Conduits.....	118	Number of Simulated Conduits.....	121
Number of Natural Channels.....	7	Number of Junctions.....	118
Number of Storage Junctions.....	2	Number of Weirs.....	1
Number of Orifices.....	0	Number of Pumps.....	0
Number of Free Outfalls.....	2	Number of Tide Gate Outfalls.....	0

==
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
==

The Conduit with the largest average change was..E135.4 with 19.825 percent
The Junction with the largest average change was.A-6 with 0.061 percent
The Conduit with the largest sinuosity was.....L-A-5 with 64.110

==
| Table E21. Continuity balance at the end of the simulation |
| Junction Inflow, Outflow or Street Flooding |
| Error = Inflow + Initial Volume - Outflow - Final   Volume |

#####################################################
# Table E22. Numerical Model judgement section    #
#####################################################

Your overall error was                                    2.4316 percent

Worst nodal error was in node ML-D3            with       5.8622 percent

Of the total inflow this loss was                         1.1241 percent

Your overall continuity error was                 Good

                                                Excellent Efficiency

Efficiency of the simulation                      1.06

Most Number of Non Convergences at one Node       0.

Total Number Non Convergences at all Nodes        0.

Total Number of Nodes with Non Convergences       0.

==
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |
| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |

==================
| Conduit Volume |
==================

Full pipe or full open conduit volume
Input full depth volume..... 1.1930E+06 cubic feet

===> Warning !! The upstream and downstream junctions for the following conduits
have been reversed to correspond to the positive flow and decreasing
slope convention. A negative flow in the output thus means
the flow was from your original upstream junction to your original

downstream junction. Any initial flow has been multiplied by -1.

1. Conduit #...A-16 OL has been changed.
2. Conduit #...A-17 OL has been changed.
3. Conduit #...A-18 OL has been changed.
4. Conduit #...A-19 OL has been changed.

Table E10 - CONDUIT SUMMARY STATISTICS
Note: The peak flow may be less than the design flow and the conduit may still surcharge because of the downstream boundary conditions.

* denotes an open conduit that has been overtopped this is a potential source of severe errors

Conduit Name	Design Flow (cfs)	Conduit Design Velocity (ft/s)	Maximum Vertical Depth (in)	Maximum Computed Flow (cfs)	Time of Occurence Hr.	Min.	Maximum Computed Velocity (ft/s)	Time of Occurence Hr.	Min.	Ratio of Max. to Design Flow	Maximum Water Elev at Pipe Ends Upstream (ft)	Dwnstrm (ft)	Ratio d/D US	DS

Table E15 - SPREADSHEET INFO LIST
Conduit Flow and Junction Depth Information for use in spreadsheets. The maximum values in this table are the true maximum values because they sample every time step. The values in the review results may only be the maximum of a subset of all the time steps in the run.
Note: These flows are only the flows in a single barrel.

Conduit Name	Maximum Flow (cfs)	Total Flow (ft^3)	Maximum Velocity (ft/s)	Maximum Volume (ft^3)	##	Junction Name	Invert Elevation (ft)	Maximum Elevation (ft)

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

==================================

Number of Input Conduits.....	52	Number of Simulated Conduits.....	53
Number of Natural Channels.....	0	Number of Junctions.....	43
Number of Storage Junctions.....	9	Number of Weirs.....	0
Number of Orifices.....	0	Number of Pumps.....	0
Number of Free Outfalls.....	1	Number of Tide Gate Outfalls.....	0

==
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
==

The Conduit with the largest average change was..L_MH-A4   with   0.733 percent
The Junction with the largest average change was.A-10   with   0.017 percent
The Conduit with the largest sinuosity was.......L_MH-A1   with   12.663

#####################################################
# Table E22. Numerical Model judgement section    #
#####################################################

Your overall error was                                    0.9218 percent

Worst nodal error was in node BF-63            with       2.7166 percent

Of the total inflow this loss was                         1.5065 percent

Your overall continuity error was                 Excellent

                                                 Excellent Efficiency

Efficiency of the simulation                      1.19

Most Number of Non Convergences at one Node       0.

Total Number Non Convergences at all Nodes        0.

Total Number of Nodes with Non Convergences       0.

  Number of Elements in the Transport Block (NET).....     0
  Number of Storage Junctions in Transport (NTSE).....     0
  Number of Input Hydrographs in Transport (NTH)......     0
  Number of Elements in the Extran Block (NEE)........    79
  Number of Groundwater Subcatchments in Runoff (NGW).     0
  Number of Interface locations for all Blocks (NIE)..    79
  Number of Pumps in Extran (NEP).....................     0
  Number of Orifices in Extran (NEO)..................     0
  Number of Tide Gates/Free Outfalls in Extran (NTG)..     1
  Number of Extran Weirs (NEW)........................     2
  Number of scs hydrograph points.....................     1
  Number of Extran printout locations (NPO)...........     0
  Number of Tide elements in Extran (NTE).............     1
  Number of Natural channels (NNC)....................     8
  Number of Storage junctions in Extran (NVSE)........    33
  Number of Time history data points in Extran(NTVAL).     5
  Number of Variable storage elements in Extran (NVST)    10
  Number of Input Hydrographs in Extran (NEH).........    50
  Number of Particle sizes in Transport Block (NPS)...     0
  Number of User defined conduits (NHW)...............    79
  Number of Connecting conduits in Extran (NECC)......    20
  Number of Upstream elements in Transport (NTCC).....    10
  Number of Storage/treatment plants (NSTU)...........     1
```

```
 Number of Values for R1 lines in Transport (NR1)....     0
 Number of Nodes to be allowed for (NNOD)............    79
 Number of Plugs in a Storage Treatment Unit.........     1

    US 290/ Hempstead Highway Corridor - From W.Little York to Hollister
    Drainage Impact & Mitigation Study - Existing Conditions - SegB_SysA -1

*============================================================*
|        HYDRAULICS TABLES IN THE OUTPUT FILE                |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |
| Table E7   - Iteration Summary                             |
| Table E8   - Junction Time Step Limitation Summary         |
| Table E9   - Junction  Summary  Statistics                 |
| Table E10  - Conduit   Summary  Statistics                 |
| Table E11  - Area assumptions used in the analysis         |
| Table E12  - Mean conduit information                      |
| Table E13  - Channel losses(H) and culvert info            |
| Table E13a - Culvert Analysis Classification               |
| Table E14  - Natural Channel Overbank Flow Information     |
| Table E14a - Natural Channel Encroachment Information      |
| Table E14b - Floodplain Mapping                            |
| Table E15  - Spreadsheet Info List                         |
| Table E15a - Spreadsheet Reach List                        |
| Table E16  - New Conduit Output Section                    |
| Table E17  - Pump Operation                                |
| Table E18  - Junction Continuity Error                     |
| Table E19  - Junction Inflow & Outflow Listing             |
| Table E20  - Junction Flooding and Volume List             |
| Table E21  - Continuity balance at simulation end          |
| Table E22  - Model Judgement Section                       |

Time Control from Hydraulics Job Control
Year.........    1995 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................    172800
Length of integration step is......      1.00 seconds
Simulation length...................     48.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.      8.33 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..      8.33 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00010
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....    50
     or user defined hydrographs....

        Natural Cross-Section information for Channel E135.4
        ====================================================
         Cross-Section ID (from X1 card) :     1.0 Channel sequence number :     1

  Left Overbank Length   :     74.0 ft               Maximum Elevation        :   116.46 ft.

Total length of all conduits .... 21906.5581 feet

==========
|Table E2 - Conduit Factor Data|
==========

Conduit Name	Number of Barrels	Entrance Loss Coef	Exit Loss Coef	Exp/Contc Coefficnt	Time Weighting Parameter	Low Flow Roughness Factor	Depth at Which n Changes	Flow Routing
E135.5	2.0000	0.5000	0.5000	0.0000	0.8500	1.0000	0.0000	Standard - Dynamic Wave
02-RCP	1.0000	0.5000	0.5000	0.0000	0.8500	1.0000	0.0000	Standard - Dynamic Wave
03-RCP	1.0000	0.5000	0.5000	0.0000	0.8500	1.0000	0.0000	Standard - Dynamic Wave

==========
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |
| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |

Table E10 - CONDUIT SUMMARY STATISTICS
Note: The peak flow may be less than the design flow and the conduit may still surcharge because of the downstream boundary conditions.

* denotes an open conduit that has been overtopped
this is a potential source of severe errors

Conduit	Design Flow	Conduit Design Velocity	Maximum Vertical Depth	Maximum Computed Flow	Time of Occurence	Maximum Computed Velocity	Time of Occurence	Ratio of Max. to Design	Maximum Water Elev at Pipe Ends Upstream	Dwnstrm	Ratio d/D US	DS

Table E15 - SPREADSHEET INFO LIST

Conduit Flow and Junction Depth Information for use in spreadsheets. The maximum values in this table are the true maximum values because they sample every time step. The values in the review results may only be the maximum of a subset of all the time steps in the run. Note: These flows are only the flows in a single barrel.

Conduit Name	Maximum Flow (cfs)	Total Flow (ft^3)	Maximum Velocity (ft/s)	Maximum Volume (ft^3)	##	Junction Name	Invert Elevation (ft)	Maximum Elevation (ft)

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts.
The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation
Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

| Simulation Specific Information |
==================================

Number of Input Conduits.....	76	Number of Simulated Conduits.....	79
Number of Natural Channels.....	8	Number of Junctions.....	64
Number of Storage Junctions.....	33	Number of Weirs.....	2
Number of Orifices.....	0	Number of Pumps.....	0
Number of Free Outfalls.....	1	Number of Tide Gate Outfalls.....	0

===
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
===

The Conduit with the largest average change was..E535-03 WE with   16.737 percent
The Junction with the largest average change was.E135-01   with   0.016 percent
The Conduit with the largest sinuosity was.......L_B-6-OF   with   59.405

|        HYDRAULICS TABLES IN THE OUTPUT FILE              |
|  These are the more important tables in the output file.  |
|  You can use your editor to find the table numbers,       |
|  for example: search for Table E20 to check continuity.   |
|  This output file can be imported into a Word Processor   |
|  and printed on US letter or A4 paper using portrait      |
|  mode, courier font, a size of 8 pt. and margins of 0.75  |
|                                                           |
| Table E1   - Basic Conduit Data                           |
| Table E2   - Conduit Factor Data                          |
| Table E3a  - Junction Data                                |
| Table E3b  - Junction Data                                |
| Table E4   - Conduit Connectivity Data                    |
| Table E4a  - Dry Weather Flow Data                        |
| Table E4b  - Real Time Control Data                       |
| Table E5   - Junction Time Step Limitation Summary        |
| Table E5a  - Conduit Explicit Condition Summary           |
| Table E6   - Final Model Condition                        |
| Table E7   - Iteration Summary                            |
| Table E8   - Junction Time Step Limitation Summary        |
| Table E9   - Junction  Summary  Statistics                |
| Table E10  - Conduit   Summary  Statistics                |
| Table E11  - Area assumptions used in the analysis        |
| Table E12  - Mean conduit information                     |
| Table E13  - Channel losses(H) and culvert info           |
| Table E13a - Culvert Analysis Classification              |
| Table E14  - Natural Channel Overbank Flow Information    |
| Table E14a - Natural Channel Encroachment Information     |
| Table E14b - Floodplain Mapping                           |
| Table E15  - Spreadsheet Info List                        |
| Table E15a - Spreadsheet Reach List                       |
| Table E16  - New Conduit Output Section                   |
| Table E17  - Pump Operation                               |
| Table E18  - Junction Continuity Error                    |
| Table E19  - Junction Inflow & Outflow Listing            |
| Table E20  - Junction Flooding and Volume List            |
| Table E21  - Continuity balance at simulation end         |
| Table E22  - Model Judgement Section                      |

Time Control from Hydraulics Job Control
Year.........    2007 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................      6480
Length of integration step is......     20.00 seconds
Simulation length...................     36.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       180 cycles
Intermediate printout intervals of.     60.00 minutes
Summary printout intervals of......       180 cycles
Summary printout time interval of..     60.00 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00050
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............   1000.00 feet.
NJSW input hydrograph junctions.....   119
     or user defined hydrographs....

==========
| If there are messages about (sqrt(g*d)*dt/dx), or |

| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |
| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |

Conduit Name	Courant Ratio	
L-CA-4	2.90	===> Warning ! (sqrt(wave celerity)*time step/conduit length)

*==================*
|  Conduit Volume  |
*==================*

Full pipe or full open conduit volume
Input full depth volume.............    6.7759E+06 cubic feet

===> Warning !! The upstream and downstream junctions for the following conduits
                have been reversed to correspond to the positive flow and decreasing
                slope convention.  A negative flow in the output thus means
                the flow was from your original upstream junction to your original
                downstream junction.  Any initial flow has been multiplied by -1.

                1.  Conduit #...Link589     has been changed.

===
| Table E10 - CONDUIT SUMMARY STATISTICS |
| Note: The peak flow may be less than the design flow |
| and the conduit may still surcharge because of the |
| downstream boundary conditions. |
| |
| * denotes an open conduit that has been overtopped |
| this is a potential source of severe errors |
===

Conduit Name	Design Flow (cfs)	Conduit Design Velocity (ft/s)	Maximum Vertical Depth (in)	Maximum Computed Flow (cfs)	Time of Occurence Hr.	Time of Occurence Min. | Table E15 - SPREADSHEET INFO LIST |
| Conduit Flow and Junction Depth Information for use in |
| spreadsheets. The maximum values in this table are the |
| true maximum values because they sample every time step. |
| The values in the review results may only be the |
| maximum of a subset of all the time steps in the run. |
| Note: These flows are only the flows in a single barrel. |
===

Table E18 - Junction Continuity Error. Division by Volume added 11/96

Continuity Error = Net Flow + Beginning Volume - Ending Volume / Total Flow + (Beginning Volume + Ending Volume)/2

Net Flow = Node Inflow - Node Outflow
Total Flow = absolute (Inflow + Outflow)
Intermediate column is a judgement on the node continuity error.

Excellent < 1 percent Great 1 to 2 percent Good 2 to 5 percent
Fair 5 to 10 percent Poor 10 to 25 percent Bad 25 to 50 percent
Terrible > 50 percent

Junction	<------Continuity Error ------->			Remaining	Beginning	Net Flow	Total Flow	Failed to
Name	Volume	% of Node	% of Inflow	Volume	Volume	Thru Node	Thru Node	Converge

The total continuity error was 214.25 cubic feet
The remaining total volume was 82250. cubic feet
Your mean node continuity error was Excellent
Your worst node continuity error was Excellent

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3
depending on the units in your model.

Junction Name	Constant Inflow to Node	User Inflow to Node	Interface Inflow to Node	DWF Inlow to Node	Inflow through Outfall	RNF Layer Inflow to Node	Outflow from Node	Evaporation from Node	Inflow from 2D Layer

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

*==================================*
| Simulation Specific Information  |
*==================================*
Number of Input Conduits.........       168 Number of Simulated Conduits......       169
Number of Natural Channels.......         6 Number of Junctions...............       169
Number of Storage Junctions.....         60 Number of Weirs...................         0
Number of Orifices..............         0 Number of Pumps....................         0
Number of Free Outfalls.........         1 Number of Tide Gate Outfalls......         0

*=========================================================*
| Average % Change in Junction or Conduit is defined as:  |
| Conduit  % Change ==> 100.0 ( Q(n+1) - Q(n) ) / Qfull   |
| Junction % Change ==> 100.0 ( Y(n+1) - Y(n) ) / Yfull   |
*=========================================================*

The Conduit with the largest average change was..Link588    with     0.918 percent
The Junction with the largest average change was.CA-1       with     0.202 percent
The Conduit with the largest sinuosity was.......Link588    with   251.641

*==================================================================*
| Table E21. Continuity balance at the end of the simulation       |
|          Junction Inflow, Outflow or Street Flooding             |
| Error = Inflow  + Initial Volume - Outflow - Final   Volume      |
*==================================================================*

#####################################################
# Table E22. Numerical Model judgement section    #
#####################################################

Your overall error was                                    0.0006 percent

Worst nodal error was in node 6832             with       0.0259 percent

Of the total inflow this loss was                         0.0518 percent

Your overall continuity error was                Excellent

                                                Excellent Efficiency
```

```
Efficiency of the simulation                      2.18

Most Number of Non Convergences at one Node       2.

Total Number Non Convergences at all Nodes       11.

Total Number of Nodes with Non Convergences      10.

|        HYDRAULICS TABLES IN THE OUTPUT FILE                |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |
| Table E7   - Iteration Summary                             |
| Table E8   - Junction Time Step Limitation Summary         |
| Table E9   - Junction  Summary  Statistics                 |
| Table E10  - Conduit   Summary  Statistics                 |
| Table E11  - Area assumptions used in the analysis         |
| Table E12  - Mean conduit information                      |
| Table E13  - Channel losses(H) and culvert info            |
| Table E13a - Culvert Analysis Classification               |
| Table E14  - Natural Channel Overbank Flow Information     |
| Table E14a - Natural Channel Encroachment Information      |
| Table E14b - Floodplain Mapping                            |
| Table E15  - Spreadsheet Info List                         |
| Table E15a - Spreadsheet Reach List                        |
| Table E16  - New Conduit Output Section                    |
| Table E17  - Pump Operation                                |
| Table E18  - Junction Continuity Error                     |
| Table E19  - Junction Inflow & Outflow Listing             |
| Table E20  - Junction Flooding and Volume List             |
| Table E21  - Continuity balance at simulation end          |
| Table E22  - Model Judgement Section                       |

Time Control from Hydraulics Job Control
Year.........    2007 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles..................    129600
Length of integration step is......      1.00 seconds
Simulation length...................     36.00 hours
Do not create equiv. pipes(NEQUAL)..         0
Use U.S. customary units for I/O...          0
Printing starts in cycle...........          1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.      8.33 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..      8.33 minutes
Hot start file parameter (REDO)....          0
Initial time........................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00010
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   1.00000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....          0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....    23
     or user defined hydrographs....

        Natural Cross-Section information for Channel Link587

```
Total length of all conduits ....     19614.7710 feet

*=================================================*
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length  |
| in the output file all it means is that the       |
| program will lower the internal time step to      |
| satisfy this condition (explicit condition).      |
| You control the actual internal time step by      |
| using the minimum courant time step factor in the |
| HYDRAULICS job control.  The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection.    |
| You have further control by using the modify      |
| conduit option in the HYDRAULICS Job Control.     |
*=================================================*

Table E10 - CONDUIT SUMMARY STATISTICS
Note: The peak flow may be less than the design flow and the conduit may still surcharge because of the downstream boundary conditions.

* denotes an open conduit that has been overtopped this is a potential source of severe errors

| Table E15 - SPREADSHEET INFO LIST |
| Conduit Flow and Junction Depth Information for use in |
| spreadsheets. The maximum values in this table are the |
| true maximum values because they sample every time step. |
| The values in the review results may only be the |
| maximum of a subset of all the time steps in the run. |
| Note: These flows are only the flows in a single barrel. |
===

Table E18 - Junction Continuity Error. Division by Volume added 11/96

Continuity Error = Net Flow + Beginning Volume - Ending Volume
---
Total Flow + (Beginning Volume + Ending Volume)/2

Net Flow = Node Inflow - Node Outflow
Total Flow = absolute (Inflow + Outflow)
Intermediate column is a judgement on the node continuity error.

Excellent < 1 percent Great 1 to 2 percent Good 2 to 5 percent
Fair 5 to 10 percent Poor 10 to 25 percent Bad 25 to 50 percent
Terrible > 50 percent

Junction Name	<------Continuity Error -------> Volume	% of Node	% of Inflow	Remaining Volume	Beginning Volume	Net Flow Thru Node	Total Flow Thru Node	Failed to Converge

The total continuity error was -60696. cubic feet
The remaining total volume was 46723. cubic feet
Your mean node continuity error was Excellent
Your worst node continuity error was Excellent

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3 depending on the units in your model.

Junction Name	Constant Inflow to Node	User Inflow to Node	Interface Inflow to Node	DWF Inlow to Node	Inflow through Outfall	RNF Layer Inflow to Node	Outflow from Node	Evaporation from Node	Inflow from 2D Layer

Table E20 - Junction Flooding and Volume Listing.
The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts.
The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation
Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

==================================
| Simulation Specific Information |
==================================

Number of Input Conduits.....	49	Number of Simulated Conduits.....	50
Number of Natural Channels.....	5	Number of Junctions.....	50
Number of Storage Junctions.....	20	Number of Weirs.....	0
Number of Orifices.....	0	Number of Pumps.....	0
Number of Free Outfalls.....	1	Number of Tide Gate Outfalls.....	0

===
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
===

The Conduit with the largest average change was..Link590 with 2.059 percent
The Junction with the largest average change was.AN-2 with 0.023 percent
The Conduit with the largest sinuosity was.....L-RD-3 with 6.954

|       HYDRAULICS TABLES IN THE OUTPUT FILE                 |
|  These are the more important tables in the output file.   |
|  You can use your editor to find the table numbers,        |
|  for example: search for Table E20 to check continuity.    |
|  This output file can be imported into a Word Processor    |
|  and printed on US letter or A4 paper using portrait       |
|  mode, courier font, a size of 8 pt. and margins of 0.75   |
|                                                            |
| Table E1   - Basic Conduit Data                            |
| Table E2   - Conduit Factor Data                           |
| Table E3a  - Junction Data                                 |
| Table E3b  - Junction Data                                 |
| Table E4   - Conduit Connectivity Data                     |
| Table E4a  - Dry Weather Flow Data                         |
| Table E4b  - Real Time Control Data                        |
| Table E5   - Junction Time Step Limitation Summary         |
| Table E5a  - Conduit Explicit Condition Summary            |
| Table E6   - Final Model Condition                         |
| Table E7   - Iteration Summary                             |
| Table E8   - Junction Time Step Limitation Summary         |
| Table E9   - Junction  Summary  Statistics                 |
| Table E10  - Conduit   Summary  Statistics                 |
| Table E11  - Area assumptions used in the analysis         |
| Table E12  - Mean conduit information                      |
| Table E13  - Channel losses(H) and culvert info            |
| Table E13a - Culvert Analysis Classification               |
| Table E14  - Natural Channel Overbank Flow Information     |
| Table E14a - Natural Channel Encroachment Information      |
| Table E14b - Floodplain Mapping                            |
| Table E15  - Spreadsheet Info List                         |
| Table E15a - Spreadsheet Reach List                        |
| Table E16  - New Conduit Output Section                    |
| Table E17  - Pump Operation                                |
| Table E18  - Junction Continuity Error                     |
| Table E19  - Junction Inflow & Outflow Listing             |
| Table E20  - Junction Flooding and Volume List             |
| Table E21  - Continuity balance at simulation end          |
| Table E22  - Model Judgement Section                       |

Time Control from Hydraulics Job Control
Year.........    2007 Month.......       1
Day..........       1 Hour........       0
Minute.......       0 Second......       0

Control information for simulation
----------------------------------

Integration cycles...................     12960
Length of integration step is.....      10.00 seconds
Simulation length...................     36.00 hours
Do not create equiv. pipes(NEQUAL).         0
Use U.S. customary units for I/O...         0
Printing starts in cycle...........         1
Intermediate printout intervals of.       500 cycles
Intermediate printout intervals of.     83.33 minutes
Summary printout intervals of......       500 cycles
Summary printout time interval of..     83.33 minutes
Hot start file parameter (REDO)....         0
Initial time.......................      0.00 hours

Iteration variables: Flow Tolerance.   0.00010
                     Head Tolerance.   0.00010
    Minimum depth (m or ft).........   0.00001
    Underrelaxation parameter.......   0.85000
    Time weighting parameter........   0.85000
    Conduit roughness factor........   1.00000
    Flow adjustment factor..........   1.00000
    Initial Condition Smoothing.....         0
    Courant Time Step Factor........   1.00000
    Default Expansion/Contraction K.   0.00000
    Default Entrance/Exit K.........   0.00000
    Routing Method..................   Dynamic Wave
Default surface area of junctions...     12.57 square feet.
Minimum Junction/Conduit Depth......   0.00001 feet.
Ponding Area Coefficient............   5000.00
Ponding Area Exponent...............    1.0000
Minimum Orifice Length..............    500.00 feet.
NJSW input hydrograph junctions.....   140
     or user defined hydrographs....

==
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |

| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |

*==================*
|  Conduit Volume  |
*==================*

Full pipe or full open conduit volume
Input full depth volume.............    3.0888E+05 cubic feet

===> Warning !! The upstream and downstream junctions for the following conduits
                have been reversed to correspond to the positive flow and decreasing
                slope convention.  A negative flow in the output thus means
                the flow was from your original upstream junction to your original
                downstream junction.  Any initial flow has been multiplied by -1.

                1.  Conduit #...L-CC-57     has been changed.
                2.  Conduit #...L-CC-49     has been changed.

==
| Table E10 - CONDUIT SUMMARY STATISTICS |
| Note: The peak flow may be less than the design flow |
| and the conduit may still surcharge because of the |
| downstream boundary conditions. |
| |
| * denotes an open conduit that has been overtopped |
| this is a potential source of severe errors |
==

Table E15 - SPREADSHEET INFO LIST
Conduit Flow and Junction Depth Information for use in spreadsheets. The maximum values in this table are the true maximum values because they sample every time step. The values in the review results may only be the maximum of a subset of all the time steps in the run.

| Note: These flows are only the flows in a single barrel.|

Conduit Name	Maximum Flow (cfs)	Total Flow (ft^3)	Maximum Velocity (ft/s)	Maximum Volume (ft^3)	##	Junction Name	Invert Elevation (ft)	Maximum Elevation (ft)

Table E19 - Junction Inflow & Outflow Listing
Units are either ft^3 or m^3 depending on the units in your model.

Junction Name	Constant Inflow to Node	User Inflow to Node	Interface Inflow to Node	DWF Inlow to Node	Inflow through Outfall	RNF Layer Inflow to Node	Outflow from Node	Evaporation from Node	Inflow from 2D Layer

Table E20 - Junction Flooding and Volume Listing. The maximum volume is the total volume in the node including the volume in the flooded storage area. This is the max volume at any time. The volume in the flooded storage area is the total volume above the ground elevation, where the flooded pond storage area starts. The fourth column is instantaneous, the fifth is the sum of the flooded volume over the entire simulation. Units are either ft^3 or m^3 depending on the units.

Junction Name	Surcharged Time (min)	Flooded Time(min)	Out of 1D-System (Flooded Volume)	Maximum Volume	Passed to 2D cell OR Volume Stored in allowed Flood Pond of 1D-System

==================================
| Simulation Specific Information |
==================================

Number of Input Conduits.....	248	Number of Simulated Conduits.....	250
Number of Natural Channels.....	0	Number of Junctions.....	250
Number of Storage Junctions.....	88	Number of Weirs.....	0
Number of Orifices.....	0	Number of Pumps.....	1
Number of Free Outfalls.....	1	Number of Tide Gate Outfalls.....	0

===
| Average % Change in Junction or Conduit is defined as: |
| Conduit % Change ==> 100.0 (Q(n+1) - Q(n)) / Qfull |
| Junction % Change ==> 100.0 (Y(n+1) - Y(n)) / Yfull |
===

The Conduit with the largest average change was..L-CR-98 with 0.038 percent
The Junction with the largest average change was.BW8-SW with 0.255 percent
The Conduit with the largest sinuosity was.....L-CC-24 with 809.988

==
| Table E21. Continuity balance at the end of the simulation |
| Junction Inflow, Outflow or Street Flooding |
| Error = Inflow + Initial Volume - Outflow - Final   Volume |
==

################################################
# Table E22. Numerical Model judgement section #
################################################

Your overall error was                                  0.5776 percent

Worst nodal error was in node BW8-SW           with       -3.7482 percent

Of the total inflow this loss was                       0.8426 percent

Your overall continuity error was                Excellent

                                                Excellent Efficiency

Efficiency of the simulation                     1.72

Most Number of Non Convergences at one Node      0.

Total Number Non Convergences at all Nodes       0.

Total Number of Nodes with Non Convergences      0.

==
| If there are messages about (sqrt(g*d)*dt/dx), or |
| the sqrt(wave celerity)*time step/conduit length |
| in the output file all it means is that the |
| program will lower the internal time step to |
| satisfy this condition (explicit condition). |
| You control the actual internal time step by |
| using the minimum courant time step factor in the |
| HYDRAULICS job control. The message put in words |
| states that the smallest conduit with the fastest |
| velocity will control the time step selection. |
| You have further control by using the modify |
| conduit option in the HYDRAULICS Job Control. |
